A revyat of the foure Termes of Law.

**The beginnings and endings here,
Of the Law Termes you need not fear.**

| | |
|---|--|
| The first Terme we call Hillarie, Begins January twenty three. And on the twelfth of February, This Terme ends and doth not vary. From Easter seventeen daies I learn, Beginneith now this second Terme. Ascension day you may discern, Next Munday after ends this Terme. | Friday next Corpus Christi day, Trinitie Terme begins alway. And Wedn'sday fortnight is the end This Terme doth end as men do When October the ninth comes in Michaelmas Terme it doth begin And the ending now it is in, Twenty eight daies Novemb. will |

Times of marriage prohibited by the Church.

Without Licence here now you may see,

Married when you will, you cannot be.

Elect not your honest carriage,

ough Advent deny you marriage,

if long you cannot tarry,

arie bids you to marry.

agefima is a day,

saies you nay, and bids you stay.

Vntill Low-sunday be come in,

With marriage then you may begin.

Again it is Rogations will,

For to obtain from marriage still.

Vntill that holy Trinitie,

Then hath the Church her liberie.

Fallowes,

1640.

A

**Prognostication, for the
yeare of our Lord God,
1640.**

Being Bessextile or Leape yeere.

**Amplified with Compendious Ta-
bles, and rules, and also with divers
additions, both usefull and plea-
sant for many, and sundry sorts
of people.**

**By EDWARD FALLOVES, a lover
of the Arts Mathematicall.**

ECCLES. II. 4.

Hee observeth Winds, sow,
that the shall not
Hee regardeth Clouds, mow.

LONDON,

Printed for the Company of Stationers.

1640.

The Authors Apologie to his Booke.

GOe forth my Booke, my mind declare,
To friend and eke to Foe.

To shew thy selfe, thou need'st not feare,
Where ever thou dost goe.

Sith Credit with the vulgar men,

It must be put to venter.

Though Iudgement be at wants with them,

To Iudgement they will enter.

And so they will begin to boast,

The cause no whit discerning.

And thus begin to argue most,

That he hath little learning.

Then doe they seeke him to annoy,

And say that it proves faire.

This all his paines for to destroy,

His credit to impair:

Though Aspis Tongues at thee doe ayme,

For to reprehend thee.

Then fraught with skill the like to frame,

Or any way to mend thee.

But well thou knowest thy Authors fence,

To envie doth not tend.

But what's amiss, with diligence,

Hee seeketh to amend.

Farewe

A Note of all the Faires in our Borough of

by, as they are to be kept this Yeate, 1640.

Being newly corrected by the Charter.

The first is upon Fryday the 10 day of Ianuary,

the first Friday after the Epiphanie, or Twelue day.

second is upon Friday in Easter weeke being the 10

of April: The third is upon the next Friday after

May day, being the 8 day of May: The fourth is upon Fr

iday after Whitsun-weeke being the 29 of May: The fifth is

upon Friday after Iohn Baptist, Midsummer day being the

day of Iune: The 6 is upon the 25 day of Iuly being

James day: The 7 is upon the 2 day of October

being the first Friday after Michaelmas day.

Fallowes. 1640.

A briefe and easie Methode for to find
the time of high water in most of the
principall Havens of this Kingdome and
Countrie adjoining.

This little Table sheweth the age of the Moone,
and her comming to the South point.
To know the time of the Tide of full Sea in any of
the Havens above named, doe but add the houres, and
days assigned here to the Ports in this Table con-

A Prognostication,

tained, vnto the Moons coming South, founde
little Table, produceth the times of the Tides
same Ports.

Remember that the Moone, from the change to
comes to the South afternoone, and from the
the change, she comes to South before noone.

But if the houres and minutes aforesaid in
Tables, being added altogether, amount aboue 12
cast number 12 away, the remainder is your desired
all being added together they rise vnder 12, the
which cometh of the addition, is the time of high
in that Haven or Port.

Example;

This yeare 1640, February the 14 day, I
Moone to be 3 dayes old, then I looke the same
the little Table, vnder this title (the Moones
the 1st or second coluime, and answering to the
the third coluime vnder the title. (Her coming
South,) 2 houres 24 minutes the same day. I
know high water at London, Tinnmouth, Harle
Biscay, Britaine, &c. To these Havens I must ad
3 houres 00 min which stands against them in the
Coluime in that Table, so have I 5 houres 24 m
of the clocke and 24 min. afternoone) the time
water that day at London or any of those Havens.

Againe, if you would know at what time it
high water at Calice, Rye, Calho, &c; and the
29 dayes old, her coming to the South is at
clocke, 13 min. and the 11 houres 15 min. belong
Calice, &c. you must adde them together and they
22 houres 27 min. you must cast 12 houres away
there remaines 10 houre 27 min. So that it is high
water at Calice, &c. At 10 a clocke, 27 minutes in the
ning, the same and like order is to be observed of
rest.

Fallowes, 1640.

Description of all the Eclipses of the
two great lights of the world, (the
Sunne and Moone,) this yeare, 1640.

There will be two onely of the Sunne, howbeit new
of them will be seene in great Britaine.

The first of them will be seene the 10 day of May ac-
cording to our English accompt, but the 20 day of the
moneth according to the Roman. It will be very
eclipsions in the parts of America, and in new Gra-
new Spaine, and new Galicia, California, &c.

The second Eclipse will be seene (if the ayre be
clear) the third day of November according to our
English account, but the 13 day of the same moneth accord-
ing to the Roman. It will be very apparant in the Sou-
thern part of America, and in the regions of Basilia, Pa-
ra, and in Picora, &c.

To know when the *Sunne* and *Moone*
be Eclipt.

According to the opinion of the ancients, the Zodiacke
may be divided in two manners, one by Longitude
length, as into the 12 signes, &c. And the other division
of latitude or breadth, by Latitude it is divided into
degrees, and in it they imagine a line that divideth
Latitude by the middlest, having 6 degr on every
side, and this line which divideth into 2 equall
parts, the breadth of Latitude of the Zodiacke is called
Eclipticke line, because that when the Sunne and
Moone, are directly under this line, eyther joyned toge-
ther by Coniunction or divided by Opposition, then is
an Eclipse of the Sunne, or of the Moone, under this
line the 7 Planets are moved. The Sunne also
when under the midst of the said Zodiacke.

A Report of times Memorable.

A Prognostication

The use of the former Table.

In the foregoing Table one side of the leaf is diuided into two parts, or 2. Tables, and the Tables doe containe 5. Columnes a peece, and the other side of the leaf is diuided likewise. In the first to the left hand is the yeere of our Lord styled (Anno Dom.) in the second Column is titled the (Golden Number) in the 3. is titled the (Epact.) in the 4. is the (Circle Sunne) in the 5. is the (Easter day) in that on the right hand is as the left hand is.

Example.

This yeere 1640. I would know the time when Easter day will fall : then, I doe enter the left hand table, and in the first space, I find the foresaid yeere 1640. Now for this present yeere, I find the Golden Number to be 7. and the Epact, to be 17. and the Circle of the Sun to be 25. and Easter day the 5. of April. **N**ow I goe forward, to the right hand, to the yeere 1668. there I find the Golden Number to be 16. and the Epact 26. the Circle of the Sun 25. and Easter Day March 22. now for these 2 yeeres (v. z.) 1640 and 1668. they are both Leap yeeres, and the Dominical Letters are vntill St. Mathias day, and E and D, vntill the yeere after, and to know the time betwene Christmas and Shrove-sunday, for 1640 is 4 weekes 4 dayes Shrove-sunday is the 16 of February. Easter day April 5 Rogation Sunday May 10, Whitunday the 24 of May and Adventunday the 29 November, so you may find all the moveable feasts in the yeere : Also for the yeere 1668 the time betwene Christmas and Shrovesunday is 5 weekes, 3 dayes, Shrovesunday, February 1. Easter day the 22 March, Rogation Sunday the 26 of April Whitunday the 10 of May, Adventunday the 29 of November : And so of all the rest for the finding of the moveable feasts in any yeere in the Table.

Fallowes. 1640.

All the other moveable Feasts are
these (viz.)

- 1 Septuagesima Sunday the same day fortnight before Shrove Sunday.
- 2 Sexagesima the same day seventight.
- 3 Quinquagesima is Shrove Sunday.
- 4 Quadragesima the next Sunday after Shrove Sunday.
- 5 Palme Sunday is the next Sunday before Easter.
- 6 Low Sunday is the next Sunday after Easter.
- 7 Ascension day is the next Thursday after Rogation Sunday.
- 8 Trinity is the next Sunday after Whitsunday.
- 9 Corpus Christi is the next Thursday after Trinity Sunday.

An Exception.

In any Leape yeare (if Shrove Sunday fall before the 25 of February) you seek to know the time from Christ mas to Shrove Sunday taketh on, you must take the first of the 2 Letters.

As for Example.

This yeare 1640 (being Leape yeere) you shall find E, Dominicall Letter, untill the 25 of February, and then D, the rest of this yeere after : the Golden Number the whole yeere is 7.

A ready way to find the Golden Number.

Write but the yeare of our Loz 1. then divide the summe by 19, the remainder is the Golden Number.

The Epact is thus found.

Doethus to the Epact of the yeare that went last before that yeere : for which you would find the Epact, add 11, and the summe of these two make the Epact, if it surmount 30, then take 30 out, and that which resteth above is the Epact you desire.

A Prognostication, A description of the foure Quarters of the Yeere, and first of the *Winter*.

THough Rheumaticke and cold to outward sence
Our Winter seemes, and like diseases breeding :
Yet inward parts our natures best defence,
Are hot and able to digest large feeding.

Winter Quarter began the last yere 1639 Decem-
ber the 12 day, at what time the Sunne doth first enter
into the first degree of the Hyemall or Earthly Signe
Capricorne,

The Spring Quarter.

Spring time reducing all things to a meane,
Yielding the Earth a comely gallant hew :
Which earst before was barren dry and leane,
So in our veines fresh spirits doe renew.

The Spring Astronomically begins this yere 1640
the 10 day of March, the Sun then entering into the Ver-
nall, hot and dry, Cholericks, Orientall, and Equi-
noctiall signe Aries.

The Summer Quarter.

The scorching heate of Summers shining rayes,
Desolueh so the prime of natures heate :
That inward strength and moysture sore decayes,
Vnlesse with care men take refreshing meate.

Summer Quarter begins this yere the 11 day of
Iune, at which time the Sunne doth first enter into the
Tortery, Cold, and moist Plegmaticke, Septentrionall
Signe Canetr.

Autumne Quarter.

The last and worst of all the seasons gone,
Is Autumne Quarter for varietie,
Of heate and cold not keeping meane in one,
But much distempered with extremity.

Autumne Quarter begins when the Regall Planet Sol,
Entrech the first min of the Aery, hot, and moist San-
guine signe Libra, making our second Equinoctiall to
be Brick,

Fallowes, 1640.

Of the seven Climates with the 8th
and 9th added.

The ancient Authors did also divide that part of the Superficies of the Earth on the North side of the Equinoctial, which they supposed to be most habitable into seven Climates, wherein they did find 180 divers conditions and customs of men, and diversities of Beasts, and of other naturall things, the which things they perceived to have a diversity in the Countries, as where the day of the one did increase or differ, above the day of the other by halfe an houre, so that the space of the Superficies of the Earth betweene two parallel lines, wherein the longest day both increase or differ by halfe an houre, is called a Climate. The place where we suppose the first Climate to begin is distant in Latitude from the Equinoctiall by 12 degrees and 45 min. where the longest day is 12 houres & 45 min. and the place of the 7th Climate where it doth finish is in the Latitude of 50 deg. 30 min. where the longest day is 16 houres 15 min. To these 7 Climates, the latter Cosmographers have added 2 more, which they call the 8th and the 9th, beginning where the seventh Climate ends, and continuing to 35 deg. 44 min. of Latitude, with all the 7 Climates, doth containe in breadth 37 deg. 45 min. but their length is supposed to extend to 180 degrees of Longitude, which thing shall be more manifest to him that beholdeth the Latitude of them all as may appeare by the Table following. In which you may see the hours, which the greatest day containeth in every Climate in his beginning, middlest, and end, with also the elevation of the Pole, or distance from the Equinoctiall, and also the degrees of Latitude, which every Climate containeth.

To y^e Epact of y^e Year 1689 I went last before
y^e Year 1690 add a 11, & y^e sum of 97 two, The
makes y^e Epact for the year 1690 & so for any other

A Prognostication,

| The Longest Day. | | | | | | The Elevation of the Pole. Differences. | | | | | | |
|------------------|-------|----|--------|----|------|---|-------|--------|----|-----------------|----|----|
| Climate | Begin | | Midst. | | End. | | Begin | Midst. | | End of the Lat. | | |
| | H. | M. | H. | M. | H. | M. | | G. | M. | G. | M. | |

| 9 | 16 | 45 | 17 | 0 | 17 | 15 | 53 | 17 | 54 | 29 | 55 | 34 |

The first Climate is called Dia Meroes, Meroe is a City of Affricke, under the burnt Zone on this side the Equinoctiall 16 degrees.

The second is called Dia Siena, Siena is a City in the Confines of Ethiopia, where there is a well that sheweth the Summer Solsticall, because that place is under the Circle of the Tropicke of Cancer, and the Sunne seemeth to stand directly over that place at midday of the Solsticall, whereby the well is then very cleere, and hath in it no shadow at all, as the Poet Lucan maketh mention in Farsalia, where he saith.

Umbras nusquam Flectentes.
That is to say, Shadowes no where reflecting.

The

Fallowes. 1640.

The third is Dia Alexandros : Alexandria is a famous Cite in Africke, builded by great Alexander, and is the Cite of Metropolis of Egypt.

The 4. is Dia Rhodos : Rhodes is an Island of Asia the lesse, where were sometimes the Knights of the Rhodes, called the Knights of the order of St. Iohn of Knights of Ierusalem, who were driven from thence, when the Island, and Cite was taken by Sulcan Soliman, the great Turke in the yeere 1522. Philip Vrlerio Frenchman, being the Grandmaster of the Rhodes : within this 4. Climate is the Cite of Ierusalem, within the land called Palestina, and also a great part of Spaine, with many other Provinces.

The 5. is Dia Romes, Rome is the most famous Cite of Italy, and most notorious of all Europe sometimes the head of the world, Dominatrix of Nations.

The 6. is Dia Boristhenes, it is a great River of Scythia, the 4. arme of the River Istro. It falleth into the Sea Euxinum: and whereas all other Rivers of Scythia are troubled, this is cleare and faire, also wholesome to be drunke, and full of fishes.

The 7. Climate, is called Dia Rifeos. The Mountaines called Rifei, are famous in the parts of Europe, Parmatia, and are continually covered with Snow, out of the se springeth the River Tanais, well knowne in the world by name. When it is written with ph. it is the name of certaine Mountaines of Arcadia.

The 8. Climate passing through Meotis. &c.

The 9. Climate passeth through Denmarke. &c.

Before our latter writers added these 2. last Climates, to the 7. last. The Ancients judged it part of the Pole Arcticke, not to be inhabited. and assigned no Climates thereto.

This table sheweth the houre and minute of day
 breake, for the first part of the yeere for every day, as
 doth the other for the latter part of the yeere.

A Prognostication Of yceres, and of the Leap-yeere.

There are 3 differences of the yeeres, as the yeere called *Annus Magnus*, the Solar yeere, and the *nar yeere*, The great yeere is the space of time, in which all the Planets returne to the place where had bene sometime before.

The Solar yeere is a reuolution of the Sunne, ried by the proper moving of his Heauen upon his end Poles of the Globe, ending where it began, returning another yeere by the selfe same course, as Poet Virgil affirmeth.

Atque in se sua per vestigia voluitur annus.

The Tropical or true Solar yeere begins at Vernal Equinox, and containes 365 dayes.

Likewise at the first, the yeere had diuers beginnings. *Numa Pompilius* began it at the Winters Solstice, that then the Sunne beginneth to rise towards vs. *Ouid* affirmeth in these verses.

*Brama noui prima est, Veterisque nouissima Solis,
Principium capiunt Phœbus & Annus idem.*

Romulus, began it at March, at the Equinox, &c.

The Arabians, and most people of Asia, September

The Church of Rome on their 25 of December

The Egyptians and Persians the 1 of our Iuly.

The Greekes and Egyptians considering the course of the Sun, made the yeere of 365 dayes. Then by Commandement of *Iulius Caesar*, whose order were obserued, were added 6 houres, to the end to make of this number of dayes with the course of the Sun, hereof the Bissextile or Leap-yeere had his beginning from foure yeeres to foure yeeres, &c.

Fallowes. 1640.

*Bissexum sexta. Martii tenere Calende,
posteriore die celebrantur festa Matthie.*

To keepe in remembrance the Bissexile or Leape
yeare of the 6 Calends of March, the Feast of St. Mathi-
as is celebrated the latter day of the two.

The Iulian yeere is two fold, Iulian and Bissexill,
called Bissexill of Bis and Sex, that is of twice 6,
because the 6 Calends of March is twice repeated.
The 6 Calends of March is alwayes the 24 day
of February the last month of our yeere, and this day is
made of 4 times 6 houres in 4 yeeres, which make 24
houres a naturall day, and this day, is put to be the 25
day of February for St. Mathias day, so that the letter F is
twice repeated, St. Mathias day being observed upon
the latter F, according to the verse above.

Astronomical Elections for Physicke, and Chyrurgerie, depending on the course of the Moone.

And first for the preservations, to keepe the body in
health, have a respect vnto the state of the body in 3
things, Age of the patient, Complexion, and Constituti-
on of the body; Therefore when the body is filled with
naughty and superfluous humours, it is convenient to
draw blood (if the heavens consent and they are agreed
herewith, which being not circumspectly weighed, it may
be most dangerous to the patient, but when necessity bz-
areth.

As for the Pestilence, the Phrensie, the Squinancy,
the Plurisie, the Apoplexy, a continuall head:ach grow-
ing of Choler or blood, a hot burning Fever, or any ex-
treame paine, then though the heavens deny, yet a helpe
is presently to be opened; *Ad agri salutem.* This conside-
ration of medicines, some be purgative, and some comforte

How the vertues be Corroborated.

The Vertues be either vitall, animal, or naturall.

The Vitall vertues remaine in the heart, the animal in the braine, and the naturall in the liver.

The vitall vertues are governed of ☉ and ♀.

The animal of ☽, ♀ and ♀.

The naturall of ♀, and ♀.

Other vertues be also governed by the Planets, as

vertue attractiue is governed of Sol, The digestiue

The retentiue of h. The expulsiue of ☽.

Also the Signs thus governe the vertues, ♀ and ♀,

A Prognostication,

ent the attractiue, Π , and Δ the digestiue, γ and m ,
retentive, δ and χ the expulsiue.

All you that need, and will proceed,
To keepe your body sound,
Then goe to those, whose learning shoves,
How health it may be found.
I meane to them, that's honest men,
And learn'd Physitians are,
Can looke at thee, in Astronomie,
And for thy health take care.

Certaine Elections concerning Hus- bandry and Gardening.

According to the time of the yeare best fitting
Climate, and the nature of the soyle, which exper-
will show better then any generall rules of Aco-
differences of Climates and soyles require differen-
of times. And sometimes in all your husbandry
saies, you must be directed and over-ruled by the be-
ble seasons of the times, and mutations of the weath-

These considered you may observe
these Rules.

Plant and graft the ρ oone increasing, that is,
the Change is the Full, she being in the Signes
and Δ , the wind nor East.

Fell Timber for building, to haue it more firm
free from wormes when the sap is declining, for
the timber being most dry, it will be sooner season-
there is no ioyce or moisture for the worme to be
fed upon, and this time is between Lammas and C-
mas.

Fell Coppies, and fowell to burne, where you

Fallowes. 1640.

use the route to spring forth new supplies, in January, February, or March, in the first quarter.

Cut your Vines in February, or March, about the first quarter of the Moone, when the sap is at the lowest, for about the full Moone or Change the Vine is subject to beed, which endangereth the life thereof.

Remove Trees and Stockes, the 1 in the last quarter of November, and have a care when you take them up, that you marke which side did formerly stand toward the south, and set them againe the same way.

Good to set all kind of Quicke-set, from September till March.

Seld or lye cattell when the weather is neither too hot, nor too cold, and the Moone being in γ . α . ν .

Shere Sheep, and cut the haire to grow, the Moone increasing.

Gather Apples, Peares, &c. neare the full Moone in good weather.

Kill Bees, and Swine, neare the full Moone.

Set or sow Onions, Garlick, Parsnaps, Carrets, Turneps, Pease, and such like, after the full Moone.

Sow Cardus Benedictus in February, March, or May when the Moone is old.

Sow Parsley, Fennell, and Annis-seed, in February, or March, at the full Moone.

Sow Cabbages in February, March, or April, in the waine of the Moone, and replant them in the decayed

FINIS.
